Power Industrial Truck

Forklift Operator Safety Training - Counter Balance, Tele-handler, Piggy Back, etc.

Call us to schedule specific equipment(s) training at your job site or facility using employers or rental equipment. This course provides the necessary safe operating procedures for powered industrial trucks (forklifts) to prevent injury to personnel, damage to material, the facility and equipment. This course meets the requirements of the OSHA Powered Industrial Truck Standard (1910.178). This training will include formal instruction in a classroom setting and then practical experience at the equipment going over the specific information covered in the classroom. Upon successful completion of this course, participants will receive a Forklift Operator course completion card. The operators card is valid for 3 years.

Training takes 4 hours (2.5 hours Classroom, 1.5 drivers assessment)

The program complies with OSHA CFR 1910.178.

Topics include:

- Definition of Powered Industrial Truck
- Types of Forklifts
- The Stability Triangle
- Identification Plates
- Basic Safety Procedures
- Pre-operation Inspections
- Forklift Operation (load bearing)
- Fueling the Forklift

Forklift Operator Assessment and Certification - This operator assessment of current operator's in their knowledge of the equipment, safety rules and assessment of actual operation of the equipment. Upon successful completion of this course, participants will receive a Forklift Operator course completion card. The operators card is valid for 3 years.
